

Press Release

Ercom and Accuver Partner to Bring Network Testing & Emulation One Step Closer to Reality

*Integrated Product Delivers Capacity and Unique Device
Testing To Operational 4G Networks*

Paris, France and Seoul, South Korea – February 18, 2015 – Leading test and measurement companies Ercom and Accuver announced today they are forming a technical partnership to bring network emulation one step closer to reality. Ercom’s Mobipass network emulation software is being integrated with Accuver’s XCAL-MTS real-UE-based call-generation test system to address problems experienced by advanced LTE network operators.

“We are excited to partner with a test and measurement provider like Accuver with a large global footprint,” said Yannick Dupuch, CEO of Ercom. “We anticipate strong demand for this joint solution from advanced operators – including many in Korea and Japan – and believe our technically advanced product supporting LTE and LTE-A with carrier aggregation will be well received.”

The new product includes a unified GUI in support of a single integrated lab setup. The joint lab solution includes the specific device type emulation supported by XCAL-MTS with the scale and load testing capabilities of Ercom’s product. Mobipass can support hundreds of simultaneous UE sessions with Layer 1 to Layer 3 analyses. A Korean operator has been selected as the charter customer for the new joint offering.

“Customers with advanced 4G networks are struggling to test their network systems under heavily loaded conditions,” commented Dr. Jinsoup Joung, CEO of Accuver. “Our XCAL-MTS integrated with Mobipass provides customers with a system to stress the capacity of their network system with differing device traffic profiles simulating those found in a deployed network. This combined lab solution provides our customers with tests that are one step closer to reality.”

The first prototype of the integrated product will be demonstrated on Ercom’s stand 7J40 at Mobile World Congress in Barcelona, March 2-5. Accuver representatives will be available for joint demonstrations.

About Mobipass

Mobipass® is a lab-based emulation product capable of precise reproduction of the behaviors of thousands of devices with mixed traffic calls and RF conditions experienced on a real network. Its easy-to-use GUI, advanced multi-UE channel emulator, integrated QoS and QoE test features and rich KPI capabilities make it a strong test and measurement addition for mobile network operators deploying advanced broadband networks. Mobipass can be delivered in configurations to emulate the evolved pack core (ePC), user equipment (UE) and emulated neighbor cells.

About XCAL-MTS

XCAL-MTS is a multiple mobile/PCMCIA terminal-based data collection tool which supports a variety of wireless technologies. It is specially designed to perform load and capacity testing and allows users to troubleshoot, maintain, optimize and benchmark wireless voice/data systems and networks. Its GUI enables different types of connections, which means it is ultra-compatible.

About Ercom

Founded in 1986, Ercom is a French-based manufacturer specializing in wireless network optimization and secure communications. The Ercom R&D team has been developing technologies and advanced telecommunications solutions for almost 30 years and today focus on two principal product ranges: Mobipass LTE/4G network optimization systems and Cryptosmart secure communications. Ercom continues to pursue its aim of improving its solutions and extending its activities worldwide.

About Accuver

Accuver is a leading provider of wireless test and measurement solutions that optimize the performance and reliability of mobile networks. Working with all major network operators, infrastructure vendors, chipset manufacturers and wireless equipment OEMs, we measure, troubleshoot and optimize network performance and wireless service delivery. This involves a seamless blend of user insight, design innovation, software development, cutting-edge engineering and support services.
